Private Networks

Businesses with multiple building locations often use private lines or non-Internet circuits to interconnect their locations. USAi.net has network engineering staff with certifications from Cisco, Alvarion, Trango, Bridgewave (and many other manufacturers) who can work with your IT department to design and implement the right solution of wired, wireless, or dual connected private networks to meet your budget and your need.
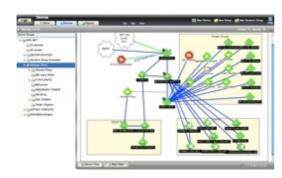

WIRED, WIRELESS, DUAL
Wired or Wireless networks including DSL and T1 all the way up to GigE and even wireless can be incorporated into a large WAN solution for multi location enterprises. You may need to network several buildings in Boston, and branch offices in other cities. USAi.net can design and deliver the network that you need.

DATA CENTER CONNECTIONS
USAi.net can provide private links back to several of the data centers in the area via wire or wireless links including The Markley Group at One Summer Street, Coresite and Internap at 70 Innerbelt Road.

NETWORK AND SERVER MONITORING

To insure that all is well with your network, our monitoring services include testing the processes on your servers or pinging your connections every two minutes and alerting your IT staff via email or pager notification which will allow them to react appropriately before the phone rings. USAi.net can also be contracted to maintain your private network, responding quickly should the need arise.

Contact our sales engineers today to arrange a free design consultation. **Toll Free 877-USE-USAi**
